

Cut-Resistant Glove Program

We as your workers' compensation provider work with a variety of industries such as manufacturing, construction, lumber yards, auto retail, mechanics, public works, dining hall services and more. The most common accident reported to us are lacerations due to handling or working around sharp objects. Although lacerations are not the costliest accident, frequency can breed severity and the use of gloves can prevent the more serious cut, sometimes keeping it off of your OSHA 300 log.

When visiting with our clients, we observed employees working with no gloves at all, nitrile gloves that offer minimal protection or gloves the employees and employers believe were offering protection but were not. Working with Jack Padden from Sales Solutions, direct manufacturer rep for Liberty Safety, we visited several machine shops literally getting a variety of gloves onto employees' hands. After a series of feedback, we were able to narrow options down to two glove models in the hopes of reducing laceration incidents for all our partners, while still allowing the employee to work productively and comfortably.

H7300 - ECODEX 300 - All Purpose Gloves **\$32.99/dozen**

- General purpose with some cut-resistance & excellent dexterity
- Constructed of 15-gauge material
- Cut-Level 1
